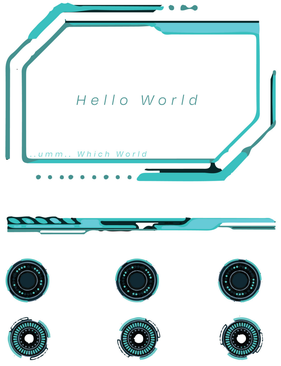
Attention Seeking



Escapism *into* **Attentivism**

So what is the story, where is attention born ?

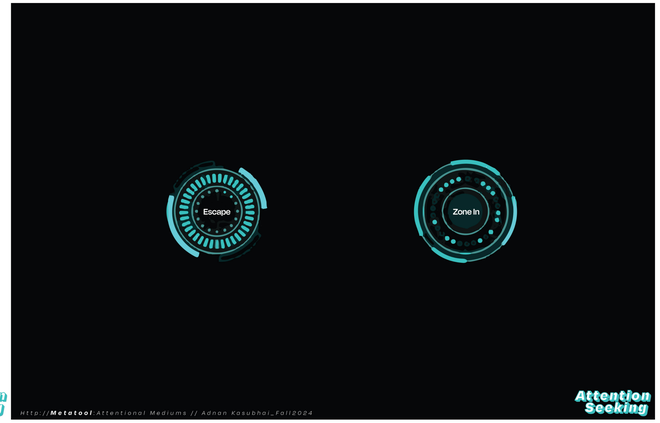
Is it stored in your brain somewhere ?

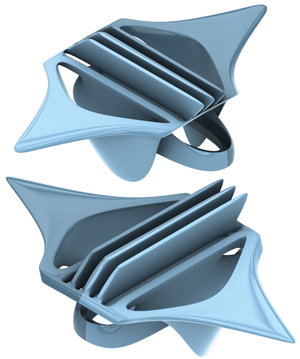
Is it hidden inside the cholestrol in your grey matter ?

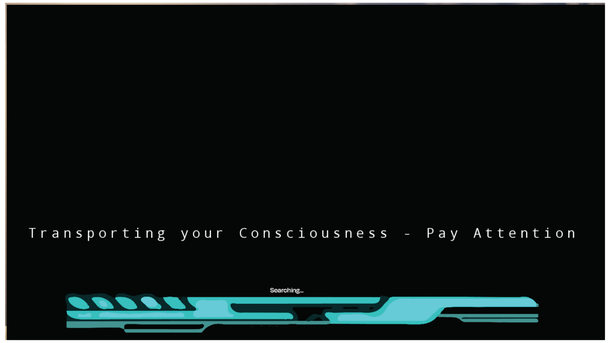
What is this attention that is somehow being depleted by the wheels of capitalism, the spokes of social media ?

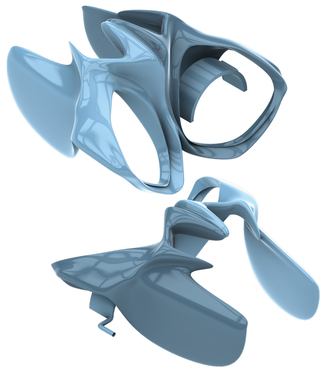
Why worry, lets all become rats in the rat race, sheep in the herd, why worry about anything that relates to attention ?

Well.. if you are still with me, this game might just be for you.

Capitalising on the idea that **'break the Matrix:** this game is designed for you to escape. Escape into worlds that almost feel real. **Procedural infinities.**








Run around, be wild. Reclaim your identity, reclaim your attention. You can take control. Thats the main purpose of the game. Taking control. Attention in many ways is given or taken subconsciously. If you can accept that and let it go then fine.
However, wait you still didnt go ?! still have your attention ? okay thats awesome, you are getting better with this. So where were we, I lost my own attention.. umm right — However, if you are looking to regain and retrain your attention it has to be consciously done. Which means you have to accept that its in your hands and this game is **a means, a tool, a metatool for you to consciously be attentive.**
